

TRACKSTER

SERVICE BULLETIN

Service Dept. CUSHMAN MOTORS Lincoln, Nebraska

18

TO: ALL TRACKSTER DEALERS

SUBJECT: CAB HEATERS

It is our understanding that many of you using the all-weather canopy manufactured by the Panorama Plastics of Vancouver, Washington, are also using a cab heater.

The heater being designed to use engine compartment air to heat the cab area could prove extremely dangerous in the event of even the slightest leak in the engine exhaust system. Should this happen, it could be very dangerous, even fatal, to the operator and passengers.

For the protection of your customers, your own protection as well as that of OMC, we strongly recommend that you remove any of these heaters you have installed. If you have sold cabs with heaters and the customers have made their own installation, we further recommend that you contact these customers and advise them accordingly.

Sincerely,

VERN GOERING
SERVICE SUPERVISOR
